Editor-in-Chief: Dr. Zhiyong Qian, China

The illustration depicts the synthesis and application of CSO-SS-Hex nanoparticles. It begins with a 'Hyaluronic acid solution' which undergoes 'Sonication' and 'Dialysis' to form a solution. This is then 'Stir vigorously' to create a suspension. The nanoparticles are then shown interacting with a red vessel, possibly a blood vessel, and being internalized by a cell. Three vials at the bottom show the color change of the solution during the process.

CSO-SS-Hex

Hyaluronic acid solution
