### ***Special Issue on “New Nuclear Reactions”***

In the last decades, experimental evidence has been accumulating on entirely new classes of nuclear reactions. They are of great importance, not only on the speculative, but also on the applicative side. It seems therefore worth to have a picture of the present status of arts, from both the theoretical and experimental viewpoint.

Fields of interest include (but are not limited to)

- Piezonuclear reactions
- Low-energy nuclear reactions
- Condensed matter nuclear reactions
- Devices and machines
- Instrumental methods and techniques

***Submission Deadline: January 10th, 2015.***
