

Indonesian Medical Education and Research Institute (IMERI) is established to respond to the emerging health issues in global society. IMERI integrates transdisciplinary medical subjects and maintains the following value prepositions: cutting edge medical science & technology, academic ambience, excellence and society impact, under the management of Faculty of Medicine, Universitas Indonesia. IMERI is the first institute of medical education and research in Indonesia with a vision of “Creating better healthcare and quality of life through disruptive innovation in medical education and research”.

The International Conference and Exhibition on Indonesian Medical Education and Research Institute (ICE on IMERI) is an annual event held at IMERI. ICE on IMERI 2016 focus on “Transdisciplinary approach to primary prevention of the diseases” with the sub-topics: (1) Stem Cell; (2) Human Genetic; (3) Metabolic Disorder; (4) Cardiovascular and Aging; (5) Human Nutrition; (6) Cancer; (7) Human Reproduction; (8) Fertility and Family Planning; (9) Medical Technology; (10) Drug Development; (11) Infectious Disease; (12) Medical Education; (13) Neuroscience; and (14) Epidemiology and Evidence Based Medicine. The objective of the conference aimed to gather experts on medical research and education from various countries to share experiences, develop knowledge, and find solution to overcome medical research issues.

Advanced Science Letter special issue on IMERI 2016 (100 full original articles) will be published soon.
